

JAZZ AT LINCOLN CENTER LIBRARY

Black And Tan Fantasy

Music by **DUKE ELLINGTON** and **BUBBER MILEY**
Arranged by **DUKE ELLINGTON**

Transcribed by David Berger and Mark Lopeman for Jazz at Lincoln Center

FULL SCORE

This transcription was made especially for *Essentially Ellington 1998: the Third Annual Jazz at Lincoln Center High School Jazz Band Competition and Festival*.

Essentially Ellington is made possible with special support from the Jack and Susan Rudin Educational and Scholarship Fund, the Surdna Foundation, The New York Times Company Foundation, the O'Grady Family Foundation, and the Fan Fox and Leslie R. Samuels Foundation.

Special thanks to Jon Faddis for editing, and David Schumacher, Scott Munson, and Randa Kirshbaum for engraving.

NOTES ON PLAYING ELLINGTON

At least 95% of modern-day large ensemble jazz playing comes out of three traditions: Count Basie's band, Duke Ellington's band and the orchestrations of small groups. Those young players interested in jazz will be drawn to small groups for the opportunity to improvise and for practical reasons (it is much easier to organize 4 or 5 people than it is 15). Schools have taken over the task (formerly performed by dance bands) of training musicians to be ensemble players. Due to the Basie Band's popularity and its simplicity of style and emphasis on blues and swing, the better educators have almost exclusively adopted this tradition for teaching jazz ensemble playing. As wonderful as Count Basie's style is, it doesn't address many of the important styles developed under the great musical umbrella we call jazz. Duke Ellington's comprehensive and eclectic approach to music offers an alternative.

The stylistic richness of Ellington's music presents a great challenge to educators and performers alike. In Basie's music the conventions are very nearly consistent. In Ellington's there are many more exceptions to the rules. This calls for greater knowledge of the language of jazz. Clark Terry, who left Count Basie's band to join Duke Ellington, said, "Count Basie was college, but Duke Ellington was graduate school." Knowledge of Ellington's music prepares you to play any big band music.

The following is a list of performance conventions for the great majority of Ellington's music. Any deviations or additions will be spelled out in the individual performance notes which follow.

1. Listen carefully many times to the Ellington recording of these pieces. There are many subtleties that will elude even the most sophisticated listener at first. Although it was never Ellington's wish to have his recordings imitated, knowledge of these definitive versions will lead musicians to make more educated choices when creating new performances. Ellington's music, though written for specific individuals, is designed to inspire all musicians to express themselves. In addition, you will hear slight note differences in the recording and the transcriptions. This is intentional, as there are mistakes and alterations from the original intent of the music in the recording. You should have your players play what's in the score.
2. General use of swing phrasing. The triplet feel prevails except for ballads or where notations such as even eighths or Latin appear. In these cases eighth notes are given equal value.
3. There is a chain of command in ensemble playing. The lead players in each section determine the phrasing and volume for their own section, and their section-mates must conform to the lead. When the saxes and/or trombones play with the trumpets, the lead trumpet is the boss. The lead alto and trombone must listen to the first trumpet and follow her. In turn the other saxes and trombones must follow their lead players. When the clarinet leads the brass section, the brass should not overblow him. That means that the first trumpet is actually playing "second." If this is done effectively, there will be very little balancing work left for the conductor.
4. In Ellington's music, each player should express the individuality of his own line. He must find a musical balance of supporting and following the section leader and bringing out the character of the underpart. Each player should be encouraged to express his or her personality through the music. In this music the underparts are played at the same volume and with the same conviction as the lead.
5. Blues inflection should permeate all parts at all times, not just when these opportunities occur in the lead.
6. Vibrato is used quite a bit to warm up the sound. Saxes (who most frequently represent the sensual side of things) usually employ a heavy vibrato on harmonized passages and a slight vibrato on unisons. Trumpets (who very often are used for heat and power) use a little vibrato on harmonized passages and no vibrato on unisons. Trombones (who are usually noble) do not use slide vibrato. A little lip vibrato is good at times. Try to match speed of vibrato. Unisons are played with no vibrato.
7. Crescendo as you ascend and diminuendo as you descend. The upper notes of phrases receive a natural accent and the lower notes are ghosted. Alto and tenor saxophones need to use subtone in the lower part of their range in order to blend properly with the rest of the section. This music was originally written with no dynamics. It pretty much follows the natural tendencies of the instruments; play loud in the loud part of the instrument and soft in the soft part of the instrument. For instance, a high C for a trumpet will be loud and a low C will be soft.
8. Quarter notes are generally played short unless otherwise notated. Long marks above or below a pitch indicate full value: not just long, but full value. Eighth notes are played full value except when followed by a rest or otherwise notated. All notes longer than a quarter note are played full value, which means if it is followed by a rest, release the note where the rest appears. For example, a half note occurring on beat one of a measure would be released on beat three.
9. Unless they are part of a legato background figure, long notes should be played somewhat *fp*; accent then diminish the volume. This is important so that the moving parts can be heard over the sustained notes. Don't just hold out the long notes, but give them life and personality; that is, vibrato, inflection, crescendo or diminuendo. There is a great deal of inflection in this music, and much of this is highly interpretive. Straight or curved lines imply non-pitched glisses, and wavy lines mean scalar (chromatic or diatonic) glisses. In general, all rhythmic figures need to be accented. Accents give the music life and swing. This is very important.
10. Ellington's music is about individuality. One person per part — do not double up because you have extra players or need more strength. More than one on a part makes it sound more like a concert band and less like a jazz band.
11. This is acoustic music. Keep amplification to an absolute minimum; in the best halls almost no amplification should be necessary. Everyone needs to develop a big sound. It is the conductor's job to balance the band. When a guitar is used, it should be a hollow body, unamplified rhythm guitar. Simple three note voicings should be used throughout. An acoustic string bass is a must. In mediocre or poorly-designed halls the bass and piano may need a bit of a boost. I recommend miking them and putting them through the house sound system. This should provide a much better tone than an amplifier. Keep in mind that the rhythm section's primary function is to accompany. The bass should not be as loud as a trumpet. That is unnatural and leads to over-amplification, bad tone and limited dynamics. Stay away from monitors. They provide a false sense of balance.
12. Solos and rhythm section parts without chord changes should be played as is or with a little embellishment. Solos and rhythm section parts with chord changes should be improvised. However, written passages should be learned because they are an important part of our jazz heritage and help the player understand the function of his particular solo or accompaniment. Soloists should learn the chord changes. Solos should not be approached as opportunities to show off technique, range, or volume, but should be looked at as a great opportunity to further develop the interesting thematic material that Ellington has provided.
13. The notation of plungers for the brass means a rubber toilet plunger bought in a hardware store. Kirkhill is a very good brand (especially if you can find one of their old rubber ones, like I loaned Wynton and he lost). Trumpets use 5" diameter and trombones use 6" diameter. Where Plunger/Mute is notated, insert a pixie mute in the bell and use the plunger over the mute. Pixies are available from Humes and Berg in Chicago. Tricky Sam Nanton and his successors in the Ellington plunger trombone chair did not use pixies. Rather, each of them employed a Nonpareil (that's the brand name) trumpet straight mute. Nonpareil has gone out of business, but the Tom Crown Nonpareil trumpet straight mute is very close to the same thing. These mutes create a wonderful sound (very close to the human voice), but also some intonation problems which must be corrected by the lip only. It would be easier to move the tuning slide, but part of the sound is in the struggle to correct the pitch. If this proves too much, stick with the pixie — it's pretty close.

14. The drummer is the de facto leader of the band. He establishes the beat and controls the volume of the ensemble. For big band playing the drummer needs to use a larger bass drum than he would for small group drumming. A 22" is preferred. The bass drum is played softly (nearly inaudible) on each beat. This is called feathering the bass drum. It provides a very important bottom to the band. The bass drum sound is not a boom and not a thud - it's in between. The larger size drum is necessary for the kicks; a smaller drum just won't be heard. The key to this style is to just keep time. A rim knock on two and four (chopping wood) is used to lock in the swing. When it comes to playing fills, the fewer, the better.
15. The horn players should stand for their solos and solis. Brass players should come down front for moderate to long solos, surrounding rests permitting. The same applies to the pep section (two trumpets and one trombone in plunger/mutes).
16. Horns should play close attention to attacks and releases. Everyone should hit together and end together.
17. Brass must be very precise when playing short notes. Notes must be stopped with the tongue, à la Louis Armstrong!!
18. Above all, everyone's focus should remain at all times on the swing. As the great bassist Chuck Israels says, "The three most important things in jazz are rhythm, rhythm, and rhythm, in that order." Or, as Bubber Miley (Ellington's first star trumpeter) said: "It don't mean a thing if it ain't got that swing."

GLOSSARY

The following are terms which describe conventions of jazz performance, from traditional New Orleans to the present avant garde.

- Break** — within the context of an ongoing time feel the rhythm section stops for one, two or four bars. Very often a soloist will improvise during a break.
- Call and response** — repetitive pattern of contrasting exchanges (derived from the church procedure of the minister making a statement and the congregation answering with "amen").
- Call and response patterns** usually pit one group of instruments against another. Sometimes we call this "trading fours," "trading twos," etc., especially when it involves improvisation. The numbers denote the amount of measures each soloist or group plays. Another term frequently used is "swapping fours."
- Coda** — also known as the "outro." "Tags" or "tag endings" are outgrowths of vaudeville bows that are frequently used as codas. They most often use deceptive cadences that finally resolve to the tonic or they go from the tonic to the sub-dominant and cycle back to the tonic: I V/IV IV #IV° I (second inversion) V/II V/V V I.
- Comp** — improvise accompaniment (for piano or guitar).
- Groove** — the composite rhythm. This generally refers to the combined repetitive rhythmic patterns of the drums, bass, piano and guitar, but may also include repetitive patterns in the horns. Some grooves are standard (i.e. swing, bossa nova, samba), while others are manufactured (original combinations of rhythms).
- Head** — melody chorus.
- Interlude** — a different form (of relatively short length) sandwiched between two chorus forms. Interludes that set up a key change are simply called modulations.
- Intro** — short for introduction.
- Ride pattern** — the most common repetitive figure played by the drummer's right hand on the ride cymbal or high hat.

- Riff** — a repeated melodic figure. Very often riffs repeat verbatim or with slight alterations while the harmonies change underneath them.
- Shout chorus** — also known as the "out chorus," the "sock chorus" or sometimes shortened to just "the shout." It is the final ensemble passage of most big band charts and where the climax most often happens.
- Soli** — a harmonized passage for two or more instruments playing the same rhythm. It is customary for horn players to stand up or even move in front of the band when playing these passages. This is done so that the audience can hear them better and to provide the audience with some visual interest. A soli sound particular to Ellington's music combines two trumpets and a trombone in plungers/mutes in triadic harmony. This is called the "pep section."
- Stop time** — a regular pattern of short breaks (usually filled in by a soloist).
- Swing** — the perfect confluence of rhythmic tension and relaxation in music creating a feeling of euphoria and characterized by accented weak beats (a democratization of the beat) and eighth notes that are played as the first and third eighth notes of an eighth note triplet. Duke Ellington's definition of swing: when the music feels like it is getting faster, but it isn't.
- Vamp** — a repeated two or four bar chord progression. Very often there may be a riff or riffs played on the vamp.
- Voicing** — the specific spacing, inversion and choice of notes that make up a chord. For instance two voicings for G7 could be:

Note that the first voicing includes a ninth and the second voicing includes a b9 and a 13. The addition of 9ths, 11ths, 13ths and alterations are up to the discretion of the pianist and soloist.

THE FOUR ELEMENTS OF MUSIC

The following are placed in their order of importance in jazz. We should never lose perspective on this order of priority.

- RHYTHM** — meter, tempo, groove and form, including both melodic rhythm and harmonic rhythm (the speed and regularity of the chord changes).
- MELODY** — what players play: a tune or series of notes.
- HARMONY** — chords and voicings.
- ORCHESTRATION** — instrumentation and tone colors.

— David Berger

BLACK AND TAN FANTASY

Instrumentation:

| | |
|-------------------------|-------------------------|
| Conductor | |
| Reed 1 (Alto Sax 1) | Trombone 1 |
| Reed 2 (Alto Sax 2) | Trombone 2 |
| Reed 3 (Tenor Sax 1) | Trombone 3 (opt. valve) |
| Reed 4 (Tenor Sax 2) | Guitar |
| Reed 5 (Baritone Sax) | Piano |
| Trumpet 1 | Bass |
| Trumpet 2 | Drums |
| Trumpet 3 (opt. cornet) | |
| Trumpet 4 | |

Original Recording Information:

BLACK AND TAN FANTASY composed by Duke Ellington and Bubber Miley,
arranged by Duke Ellington (2:49)
Recorded 5/11/45, New York City
Black, Brown & Beige (RCA/Bluebird; matrix D5VB-263-1; Br HMV J.O. 243/27-0057-A)

Otto Hardwick, Johnny Hodges, Jimmy Hamilton, Al Sears, Harry Carney, reeds;
Cat Anderson, Shelton Hemphill, Al Killian, Ray Nance, trumpets; Rex Stewart, cornet;
Lawrence Brown, Joe "Tricky Sam" Nanton, Claude Jones, trombones;
Duke Ellington, piano; Fred Guy, guitar; Junior Raglin, bass; Sonny Greer, drums.

Rehearsal Notes:

- The pep section (trumpets 1 and 3 and trombone 2) should move in front of the band for letter **A**. The trombone should stay there for the entire piece since he solos from **D** to the end. Being in the front will enable them to play with completely closed plungers and still be heard. This is important — they have the melody.
- The rhythm section needs to play with energy and forward motion throughout. Although the guitar, bass and drums mostly play quarter notes, it is essential for them to feel the underlying eighth note triplet even though they rarely play it. The piano, bass and drum parts should be learned. Then when the players understand the form sufficiently, they should play what they hear as good accompaniment to the ensemble (always keeping in mind the needs of the composition). Improvisational interplay in the rhythm section is an essential part of any jazz performance.

- Although the recording features a baritone saxophone solo at **B** and **C**, I have notated the solo for the lead alto (which is how this arrangement was originally conceived). If you choose, you may give the solo to your baritone player. In any case, this solo should be played with a light but somewhat sweet and floating sound; very lyrical. It should not be swung, but rather played with even eighth notes. This is the secondary melody of this piece and needs to be played as written or slightly paraphrased.
- The trombone solo at **D** was a set piece for Tricky Sam, but the chord symbols have been included so that the player can improvise his own blues solo. Even if the trombonist elects to play his own solo, he/she should learn this classic blues chorus. Letter **E** should be played as is or paraphrased only slightly. This was Bubber Miley's solo and is part of the melody of the piece. Incidentally, Tricky Sam only plays three beats in the first and third measures of **E**. This sounds a bit strange, so I have restored these measures to their original 4/4 structure. These breaks at **E** must be played in time so that the punctuations on 4 of bars 2 and 4 feel absolutely natural. These ensemble responses should make the sound "WHOP."
- Dynamics are important. This is an understated, but swinging, piece.

Notes from Wynton Marsalis:

Duke Ellington's take on New Orleans' funeral music. It must be played with feelings of nostalgia and pathos. Feeling, soul, and intensity come together under the supervisory eye of a steady, march-like pulse. This arrangement can be opened up for solos, and is an excellent vehicle for the development of muted vocal techniques in the brass. Duke and the fellas sound like they had a little trouble with that call-and-response break at the end. But that's okay. That's life.

Slow swing, ♩ = 77

Black & Tan Fantasy

Score for Black & Tan Fantasy, page 4. The score includes parts for Alto, Tenor, Bari, Tpt. 1-4, Tbn. 1-3, Gtr., Pno., Bass, and Drms. A large red watermark "Preview Only Requires Purchase" is overlaid diagonally across the page.

Key signature: B-flat major (two flats). Time signature: 4/4.

Section C begins at measure 11. The Alto part features a melodic line with triplets and slurs. The Tenor and Bari parts provide harmonic support with sustained notes and some movement. The Tbn. 3 part has a solo section labeled "open - solo - even 8ths" starting at measure 11. The Gtr. and Pno. parts provide harmonic accompaniment with chords and arpeggios. The Bass and Drms. parts provide a steady rhythmic foundation.

Chord changes for Gtr. and Pno. (measures 11-15):

| Measure | Gtr. Chords | Pno. Chords |
