

Jazz at Lincoln Center Library

Tutti for Cootie

BY DUKE ELLINGTON AND JIMMY HAMILTON

Transcribed by David Berger for Jazz at Lincoln Center

FULL SCORE

This transcription was made especially for *Essentially Ellington 2001*:
the Sixth Annual Jazz at Lincoln Center High School Jazz Band Competition & Festival.

Essentially Ellington is made possible with special support from
The Jack and Susan Rudin Educational and Scholarship Fund, Danny Kaye and Sylvia Fine Kaye Foundation,
Surdna Foundation, the National Endowment for the Arts, Verve Music Group, The Ella Fitzgerald Charitable Foundation,
The Heckscher Foundation for Children, The New York Times Company Foundation,
and the Fan Fox and Leslie R. Samuels Foundation. As of June 30, 2000.

Annual High School Jazz Band Competition & Festival

Jazz at Lincoln Center

NOTES ON PLAYING ELLINGTON

At least 95% of modern-day large ensemble jazz playing comes out of three traditions: Count Basie's band, Duke Ellington's band, and the orchestrations of small groups. Those young players interested in jazz will be drawn to small groups for the opportunity to improvise and for practical reasons (it is much easier to organize 4 or 5 people than it is 15). Schools have taken over the task (formerly performed by dance bands) of training musicians to be ensemble players. Due to the Basie Band's popularity and its simplicity of style and emphasis on blues and swing, the better educators have almost exclusively adopted this tradition for teaching jazz ensemble playing. As wonderful as Count Basie's style is, it doesn't address many of the important styles developed under the great musical umbrella we call jazz. Duke Ellington's comprehensive and eclectic approach to music offers an alternative.

The stylistic richness of Ellington's music presents a great challenge to educators and performers alike. In Basie's music, the conventions are very nearly consistent. In Ellington's, there are many more exceptions to the rules. This calls for greater knowledge of the language of jazz. Clark Terry, who left Count Basie's band to join Duke Ellington, said, "Count Basie was college, but Duke Ellington was graduate school." Knowledge of Ellington's music prepares you to play any big band music.

The following is a list of performance conventions for the great majority of Ellington's music. Any deviations or additions will be spelled out in the individual performance notes which follow.

1. Listen carefully many times to the Ellington recording of these pieces. There are many subtleties that will elude even the most sophisticated listener at first. Although it was never Ellington's wish to have his recordings imitated, knowledge of these definitive versions will lead musicians to make more educated choices when creating new performances. Ellington's music, though written for specific individuals, is designed to inspire all musicians to express themselves. In addition, you will hear slight note differences in the recording and the transcriptions. This is intentional, as there are mistakes and alterations from the original intent of the music in the recording. You should have your players play what's in the score.
2. General use of swing phrasing. The triplet feel prevails except for ballads or where notations such as even eighths or Latin appear. In these cases, eighth notes are given equal value.
3. There is a chain of command in ensemble playing. The lead players in each section determine the phrasing and volume for their own section, and their section-mates must conform to the lead. When the saxes and/or trombones play with the trumpets, the lead trumpet is the boss. The lead alto and trombone must listen to the first trumpet and follow her. In turn, the other saxes and trombones must follow their lead players. When the clarinet leads the brass section, the brass should not overblow him. That means that the first trumpet is actually playing "second." If this is done effectively, there will be very little balancing work left for the conductor.
4. In Ellington's music, each player should express the individuality of his own line. He must find a musical balance of supporting and following the section leader and bringing out the character of the underpart. Each player should be encouraged to express his or her personality through the music. In this music, the underparts are played at the same volume and with the same conviction as the lead.
5. Blues inflection should permeate all parts at all times, not just when these opportunities occur in the lead.
6. Vibrato is used quite a bit to warm up the sound. Saxes (who most frequently represent the sensual side of things) usually employ a heavy vibrato on harmonized passages and a slight vibrato on unisons. Trumpets (who very often are used for heat and power) use a little vibrato on harmonized passages and no vibrato on unisons. Trombones (who are usually noble) do not use slide vibrato. A little lip vibrato is good at times. Try to match the speed of vibrato. Unisons are played with no vibrato.
7. Crescendo as you ascend and diminuendo as you descend. The upper notes of phrases receive a natural accent and the lower notes are ghosted. Alto and tenor saxophones need to use subtone in the lower part of their range in order to blend properly with the rest of the section. This music was originally written with no dynamics. It pretty much follows the natural tendencies of the instruments; play loud in the loud part of the instrument and soft in the soft part of the instrument. For instance, a high C for a trumpet will be loud and a low C will be soft.
8. Quarter notes are generally played short unless otherwise notated. Long marks above or below a pitch indicate full value: not just long, but full value. Eighth notes are played full value except when followed by a rest or otherwise notated. All notes longer than a quarter note are played full value, which means if it is followed by a rest, release the note where the rest appears. For example, a half note occurring on beat one of a measure would be released on beat three.
9. Unless they are part of a legato background figure, long notes should be played somewhat *fp*; accent then diminish the volume. This is important so that the moving parts can be heard over the sustained notes. Don't just hold out the long notes, but give them life and personality: that is, vibrato, inflection, crescendo, or diminuendo. There is a great deal of inflection in this music, and much of this is highly interpretive. Straight or curved lines imply non-pitched glisses, and wavy lines mean scalar (chromatic or diatonic) glisses. In general, all rhythmic figures need to be accented. Accents give the music life and swing. This is very important.
10. Ellington's music is about individuality: one person per part—do not double up because you have extra players or need more strength. More than one on a part makes it sound more like a concert band and less like a jazz band.
11. This is acoustic music. Keep amplification to an absolute minimum; in the best halls, almost no amplification should be necessary. Everyone needs to develop a big sound. It is the conductor's job to balance the band. When a guitar is used, it should be a hollow-body, unamplified rhythm guitar. Simple three-note voicings should be used throughout. An acoustic string bass is a must. In mediocre or poorly designed halls, the bass and piano may need a bit of a boost. I recommend miking them and putting them through the house sound system. This should provide a much better tone than an amplifier. Keep in mind that the rhythm section's primary function is to accompany. The bass should not be as loud as a trumpet. That is unnatural and leads to over-amplification, bad tone, and limited dynamics. Stay away from monitors. They provide a false sense of balance.
12. Solos and rhythm section parts without chord changes should be played as is or with a little embellishment. Solos and rhythm section parts with chord changes should be improvised. However, written passages should be learned because they are an important part of our jazz heritage and help the player understand the function of his particular solo or accompaniment. Soloists should learn the chord changes. Solos should not be approached as opportunities to show off technique, range, or volume, but should be looked at as a great opportunity to further develop the interesting thematic material that Ellington has provided.
13. The notation of plungers for the brass means a rubber toilet plunger bought in a hardware store. Kirkhill is a very good brand (especially if you can find one of their old rubber ones, like the one I loaned Wynton and he lost). Trumpets use 5" diameter and trombones use 6" diameter. Where Plunger/Mute is notated, insert a pixie mute in the bell and use the plunger over the mute. Pixies are available from Humes & Berg in Chicago. Tricky Sam Nanton and his successors in the Ellington plunger trombone chair did not use pixies. Rather, each of them employed a Nonpareil (that's the brand name) trumpet straight mute. Nonpareil has gone out of business, but the Tom Crown Nonpareil trumpet straight mute is very close to the same thing. These mutes create a wonderful sound (very close to the human voice), but they also create some intonation problems which must be corrected by the lip only. It would be easier to move the tuning slide, but part of the sound is in the struggle to correct the pitch. If this proves too much, stick with the pixie—it's pretty close.

14. The drummer is the de facto leader of the band. He establishes the beat and controls the volume of the ensemble. For big band playing, the drummer needs to use a larger bass drum than he would for small group drumming. A 22" is preferred. The bass drum is played softly (nearly inaudible) on each beat. This is called feathering the bass drum. It provides a very important bottom to the band. The bass drum sound is not a boom and not a thud—it's in between. The larger size drum is necessary for the kicks; a smaller drum just won't be heard. The key to this style is to just keep time. A rim knock on two and four (chopping wood) is used to lock in the swing. When it comes to playing fills, the fewer, the better.
15. The horn players should stand for their solos and solis. Brass players should come down front for moderate to long solos, surrounding rests permitting. The same applies to the pep section (two trumpets and one trombone in plunger/mutes).
16. Horns should pay close attention to attacks and releases. Everyone should hit together and end together.
17. Brass must be very precise when playing short notes. Notes must be stopped with the tongue, à la Louis Armstrong!!
18. Above all, everyone's focus should remain at all times on the swing. As the great bassist Chuck Israels says, "The three most important things in jazz are rhythm, rhythm, and rhythm, in that order." Or as Bubber Miley (Ellington's first star trumpeter) said, "It don't mean a thing if it ain't got that swing."

GLOSSARY

The following are terms which describe conventions of jazz performance, from traditional New Orleans to the present avant garde.

- Break** — within the context of an ongoing time feel, the rhythm section stops for one, two, or four bars. Very often a soloist will improvise during a break.
- Call and response** — repetitive pattern of contrasting exchanges (derived from the church procedure of the minister making a statement and the congregation answering with "amen"). Call-and-response patterns usually pit one group of instruments against another. Sometimes we call this "trading fours," "trading twos," etc., especially when it involves improvisation. The numbers denote the amount of measures each soloist or group plays. Another term frequently used is "swapping fours."
- Coda** — also known as the "outro." "Tags" or "tag endings" are outgrowths of vaudeville bows that are frequently used as codas. They most often use deceptive cadences that finally resolve to the tonic, or they go from the tonic to the sub-dominant and cycle back to the tonic: I V/IV IV ♯IV° I (second inversion) V/II V/V V I.
- Comp** — improvise accompaniment (for piano or guitar).
- Groove** — the composite rhythm. This generally refers to the combined repetitive rhythmic patterns of the drums, bass, piano, and guitar, but may also include repetitive patterns in the horns. Some grooves are standard (i.e., swing, bossa nova, samba), while others are manufactured (original combinations of rhythms).
- Head** — melody chorus.
- Interlude** — a different form (of relatively short length) sandwiched between two chorus forms. Interludes that set up a key change are simply called modulations.
- Intro** — short for introduction.
- Ride pattern** — the most common repetitive figure played by the drummer's right hand on the ride cymbal or hi-hat.

- Riff** — a repeated melodic figure. Very often, riffs repeat verbatim or with slight alterations while the harmonies change underneath them.
- Shout chorus** — also known as the "out chorus," the "sock chorus," or sometimes shortened to just "the shout." It is the final ensemble passage of most big band charts and where the climax most often happens.
- Soli** — a harmonized passage for two or more instruments playing the same rhythm. It is customary for horn players to stand up or even move in front of the band when playing these passages. This is done so that the audience can hear them better and to provide the audience with some visual interest. A soli sound particular to Ellington's music combines two trumpets and a trombone in plungers/mutes in triadic harmony. This is called the "pep section."
- Stop time** — a regular pattern of short breaks (usually filled in by a soloist).
- Swing** — the perfect confluence of rhythmic tension and relaxation in music creating a feeling of euphoria and characterized by accented weak beats (a democratization of the beat) and eighth notes that are played as the first and third eighth notes of an eighth-note triplet. Duke Ellington's definition of swing: when the music feels like it is getting faster, but it isn't.
- Vamp** — a repeated two- or four-bar chord progression. Very often, there may be a riff or riffs played on the vamp.
- Voicing** — the specific spacing, inversion, and choice of notes that make up a chord. For instance, two voicings for G7 could be:

Note that the first voicing includes a 9th and the second voicing includes a b9 and a 13. The addition of 9ths, 11ths, 13ths, and alterations are up to the discretion of the pianist and soloist.

THE FOUR ELEMENTS OF MUSIC

The following are placed in their order of importance in jazz. We should never lose perspective on this order of priority.

- RHYTHM** — meter, tempo, groove, and form, including both melodic rhythm and harmonic rhythm (the speed and regularity of the chord changes).
- MELODY** — what players play: a tune or series of notes.
- HARMONY** — chords and voicings.
- ORCHESTRATION** — instrumentation and tone colors.

Tutti for Cootie

Instrumentation:

Reed 1 Alto Sax	Trumpet 4
Reed 2 Alto Sax	Trumpet 5 (solo)
Reed 3 Tenor Sax	Trombone 1
Reed 4 Tenor Sax	Trombone 2
Reed 5 Baritone Sax	Trombone 3 (Bass)
Trumpet 1	Piano
Trumpet 2 (opt. Cornet)	Bass
Trumpet 3	Drums

Original Recording Information:

Tutti for Cootie, by Duke Ellington and Jimmy Hamilton (4:32)

Recorded 2/1/63, Paris

The Great Paris Concert (Atlantic Jazz 304-2)

Johnny Hodges, Russell Procope, Jimmy Hamilton, Paul Gonsalves, Harry Carney, reeds; Cat Anderson, trumpet; Ray Nance, cornet; Roy Burrows, Cootie Williams, trumpets; Lawrence Brown, Buster Cooper, trombones; Chuck Connors, bass trombone; Duke Ellington, piano/conductor; Ernie Shepard, bass; Sam Woodyard, drums.

Rehearsal Notes:

- A large part of the Ellington band's repertoire consisted of original blues pieces by Ellington, Strayhorn, and various band members. The band members contributed melodies and either Duke or Billy arranged them. This was true for Johnny Hodges, Clark Terry, Barney Bigard, Rex Stewart, and others. Jimmy Hamilton was a full-fledged arranger/composer who submitted complete scores, many of which Ellington performed and recorded verbatim. "Tutti for Cootie" (later recorded as "Fade Up") is a collaboration by Hamilton and Ellington. The sections in A \flat major were most probably written by Hamilton, and the C minor sections are by Ellington. Regardless of who wrote what, this has to be one of the most swinging blues charts ever.
- After a four-bar piano intro that sets up the shuffle groove (triplet eighth-note feel), there is one chorus of A \flat blues (Duke can be such a tease), five choruses of C \flat blues, eight choruses of A \flat blues, and a four-bar tag ending. The focus of the piece is the relationship of the trumpet to the ensemble, hence the title (named after trumpeter Cootie Williams). Cootie was the master of the growl/plunger technique as well as a major disciple of Louis Armstrong's declaratory open trumpet style. As in "Concerto for Cootie," he has an opportunity to display both sides of his personality in one piece, creating an engaging formal contrast. I recommend having the trumpet soloist stand in front of the band for the entire number. This helps the audience understand the focus and hear the soloist better without having to amplify the sound (or at least to minimize the amplification).
- Although originally written for four trumpets plus an extra solo trumpet part (Ellington sometimes carried five trumpets), the recording that this transcription comes from has only four trumpets. The fourth trumpet part was omitted throughout. This would be the logical solution for bands that similarly have only four trumpets. Of course, it would be richer to use all of the parts (the

composers' intention) if a fifth trumpet is available. Although Ellington used this only as a trumpet feature, this chart might also be useful as a guitar feature or in situations where a guest soloist (of any instrument) plays with the band.

- The theme at **A** (which comes back several times throughout the piece) pits the legato (but accented) trombones against the choppy, staccato trumpets and saxes. All of the dotted eighth notes and quarter notes should be played staccato as opposed to the eighth notes, which are played in a more legato normal swing style. I can't overemphasize the need for accents and energy to project the exuberance of this passage.
- The sax soli at **G** should be played strongly with blues inflections. A nice touch would be to have the saxes memorize their parts and stand up for this chorus. Each part should be played with strength and conviction as if it is the lead voice. This concept should prevail in all of Ellington's music.
- The final chord is really just an eighth note tied to a half note with a fermata. I had to write out the extra measures to accommodate the trumpet and drum cadenzas. I suggest that the conductor just hold out the chord and let the trumpet and drums do what they will. The effect should be somewhat chaotic—a bit chancy how they hook up. The final note for the first trumpet was written in a top line "f." Cat Anderson played it an octave higher on this recording. The original note is written in parentheses and is every bit as valid as the upper octave—maybe more so.
- The rhythm section parts are notated as played on this particular recording. I strongly recommend that young players learn to play these parts with fire and commitment before they venture out into their own interpretations. Ellington's comping is both swinging and compositional—an excellent model of propulsive big band piano playing. Both the bass and drum parts are simple, repetitive, and to the point. This style of jazz demands a driving, concise rhythm section approach to propel the horns. Much can be learned from this piece about how to be supportive and challenging without losing focus. When all is said and done, this piece is about swinging—pure, unadulterated swinging. Nothing can interfere with that.

—David Berger

Wynton Marsalis on Playing Ellington:

Duke Ellington's music is about finding a groove and swinging, and it has in it what the real meaning of hipness is. When you play his music, it makes you hip. It starts to feel good to you because it's very optimistic and rich. There's so much room in his music for you to play. His music does not have fear in it.

Swinging is about coordination: attaining an equilibrium of forces that many times don't go together. Someone who loves to swing is a great facilitator, and Duke Ellington is the very greatest of the great facilitators because he played every style of rhythm we know. He had his rhythm section with Sam Woodyard on the drums and Jimmy Woode on the bass and the rhythm section with Sonny Greer on the drums and Jimmy Blanton playing the bass. And they don't swing in one style. They had the shuffle swing; slow, slow, deep-in-the-pocket groove swing; church grooves; the Afro-Cuban pieces; ballads with the brushes; and exotic grooves on an album like *Afro-Bossa*.

When you come into contact with Duke Ellington, you're interacting with the very substance and essence of what American life is about. It takes a while to really understand what it is, but it's worth that. It's worth that extra effort it takes because once you understand it, it transforms your life and opens you up to a world of beauty that perhaps you didn't know existed.
