The Composer

Erik Morales (b. December 10, 1966) began his composing career shortly after graduation from high school in south Florida. He studied composition at Florida International University, and completed his bachelor's degree at the University of Louisiana at Lafayette. Accessible at all levels, the music of Erik Morales has a unique melodic and harmonic vocabulary that appeals to audiences nationwide. His published works encompass a large variety of styles and settings, including works for concert, orchestral, jazz, and chamber ensembles. Mr. Morales currently teaches and plays trumpet professionally in the New Orleans area, in addition to maintaining an active composing and conducting schedule.

About the Music

For centuries, mankind has been searching for sources of eternal power. Inventors and tinkerers have conceived fabulous devices that can operate by producing their own energy, or perpetual motion. Unfortunately, these machines are impossible and the inventor's claims are dubious at best. It is well known that these machines violate the principles of thermodynamics. Although there have been several US patents issued on such devices, they are still considered to be flawed in design. The US patent office now requires all perpetual motion submissions to include a working model.

This musical work is based on a repeating rhythm in common time. I call this rhythm the "eternal sequence," and it is used extensively.

It represents the boundless energy that is created by the impossible machine. Many chordal suspensions are used to give an ethereal, otherworldly quality. The free-flowing and transparent form allows the work to develop in an unconventional way, allowing melodic themes to connect and unfold. As an exercise, I recommend that the entire group clap the eternal sequence with a metronome to keep tempo. This will solidify the rhythm in the minds of the players. Once the rhythm is mastered, the piece will be easier to execute.
